

**PRESS RELEASE**  
**Bridgewater, New Jersey**  
**19 November 2019**

**Kim Technologies hires new DevOps Manager  
to support rapid expansion**

[Kim Technologies](#) today announces the appointment of **Gaurav Balyan** as **DevOps Manager**.

Gaurav's recruitment follows the October 2019 appointments of [Ammar Zuriki](#) as Software Delivery Director and [Chris Clarke](#) as Customer Director – EMEA (see [Kim Resources](#)).

Gaurav joins Kim from [CME](#) having previously worked at Nokia, Pfizer and Reuters. At CME Gaurav was involved with large systems that provide anonymous, transparent, reliable and highly liquid trading opportunities, as well as authoritative real-time (within micro/milliseconds) and historical market data. The complex CME platform provides efficient and fair access to global markets for more than 2,800 spot FX, precious metals, NDF and NDS (Non-Deliverable FX Swaps) traders in over 50 countries.

**Richard Yawn, Chief Technology Officer, Kim Technologies** says 'We are delighted that Gaurav is joining us at a time of rapid growth and investment in Kim. Given the profile of our global customers Gaurav will help us future-proof the scalability and performance of the Kim platform. We have significantly increased the size of our team over the last year and invested heavily in R&D and the release of Kim 10.0. We anticipate doubling the size of our team in the next 12 months, including new appointments in North America, Europe and Asia as we support our global customers and channel partners.'

**Gaurav Balyan** says 'I am delighted to join Kim. I am impressed by the people, the vision and the enterprise scale of the Platform. I believe my experience can help the organization achieve its ambitious targets. I am looking forward to 'digging-deep' into the architecture to help deliver the tactical and strategic enhancements that benefit our customers.'

In July 2019 [Kim v10.0](#) was released which combines the dynamic case management, automation and no-code configurability of Kim, with the Microsoft Word universal interface and the security and scalability of Microsoft Azure. Kim 10.1, which will be released in April 2020, will extend this seamless integration of Kim with Microsoft Word, Office and Office 365.

## Notes to Editors

1. Kim was established by Richard Yawn in September 2013 and is a cloud-first, no-code, configurable multi-tenant case management and workflow and document generation and automation platform applicable to all functions and sectors. View the story of Kim here - <https://kim.world/KimStory>
2. Customers configure Kim to combine intake management, work allocation (internally or externally), self-service, document automation, creation and negotiation, dynamic case management, escalation and supervision, approval process and e-signature. All cases and documents are held in one repository in Kim and are fully searchable. Configurable live and trend dashboards support all these activities.
3. In September 2010 Kim launched Kim 10.0, all the functionality of Kim without leaving Microsoft Word and Office365 - Kim 10.0: <https://kim.world/Kimv10> All the functionality of Kim without leaving Microsoft Word / Office: <https://kim.world/Kimv10Demo>
4. Kim has a three-tiered model that enables integration with other enterprise-wide systems and point solutions (from Office365 through Salesforce to DocuSign). This three-tiered model combines (i) configuration, (ii) APIs and (iii) Dell Boomi.
5. Microsoft Word, Microsoft Azure and Microsoft Office and Office 365 are registered trademarks of Microsoft Corporation.
